# What is “integrated catchment management”?

---

*Integrated Catchment Management is a process that recognises the catchment as the appropriate organising unit for understanding and managing ecosystem processes in a context that includes **social, economic and political considerations, and guides communities towards an agreed vision of sustainable natural resource management in their catchment***

---

Manaaki Whenua  
Landcare Research

# Integrated catchment management

*Aim:* Integrating biophysical, ecological and social research for catchment-scale management of water resources.

Manaaki Whenua  
Landcare Research

# Integrated catchment management

*Outcome:* Improved management of, and social learning about, land, freshwater, and near-coastal environments in catchments with multiple, interacting, and potentially conflicting land uses.

# Context

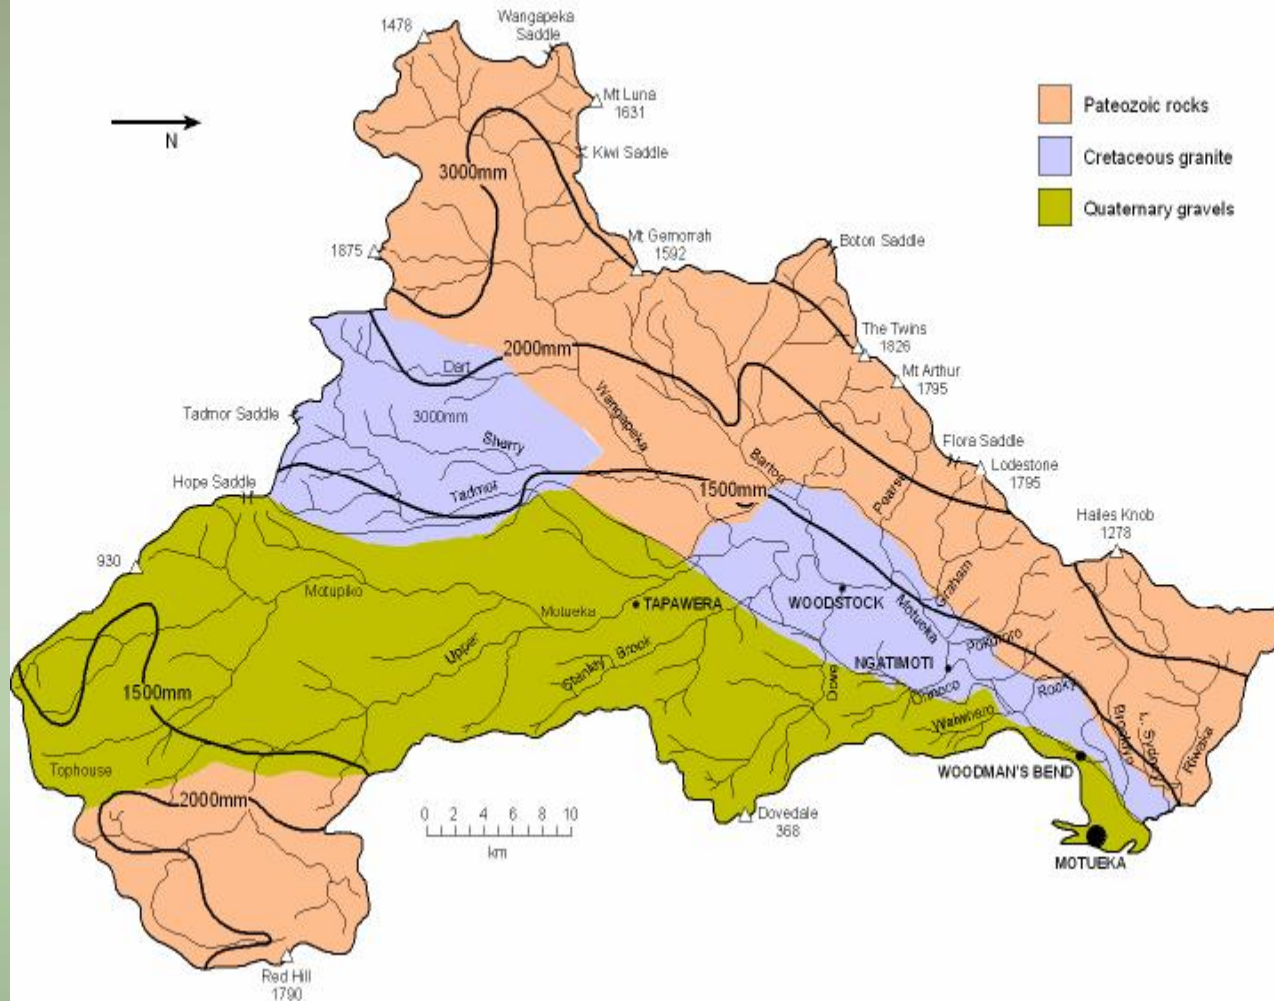

Fig 1: Motueka catchment and annual rainfall

2200 km<sup>2</sup>; complex geology; and strong rainfall gradient.

Indigenous forest in high-rainfall upper catchment.  
Used for biodiversity conservation, tourism,  
recreation.

Plantation forests on Moutere gravel hill country, mid-upper catchment

Sheep and beef farming on extensive areas in mid-catchment

Intensive horticulture at lower end of catchment

# Essentially “pristine”

Desire to keep it  
pristine despite  
pressures

# Social learning and community participation

Community reference  
group and community  
engagement

Iwi partnership

Social learning

Learning that occurs only when people engage one another, sharing diverse perspectives and experiences to develop a common framework of understanding and basis for joint action

Manaaki Whenua  
Landcare Research

# Influence matrix to help define research agenda and understand catchment interactions

Climate & atmosphere
